

Name:

Respiratory System

ACROSS

- 3 Structures projecting from a cell that move fluids over the cell surface
- 5 The flap over the trachea that keeps food from entering the windpipe
- 7 Allows air to move from the nose and mouth to the larynx
- 8 Either of the two main branches of the trachea that are the main passageways into the lungs
- 9 A pair of organs that allows the exchange of gases between the air and body
- 10 A hollow muscular organ that houses the vocal cords

DOWN

- 1 A slimy substance secreted to warm and moisten air in the respiratory system
- 2 Air sacs where oxygen and carbon dioxide move between the lungs and bloodstream
- 4 A large muscle that expands and contracts to allow breathing to occur
- 6 A long tube in the neck and chest that carries air in and out of the lungs
